Creative System Dynamics releases new online meeting service

**The new Convene v2.0 online meeting service with the most desirable features provides the easiest, most cost effective way to conduct online meetings and web-based collaboration**

Southfield, MI, March 14, 2006: Convene 2.0 is the latest release of the online meeting and collaboration solution by Creative System Dynamics. It is the most feature rich, yet simple to use product on the market. In addition, it has the lowest cost compared to similar products with the highest level of security possible.

Features include multi-desktop share with the option of application-only sharing, ability to save transcripts and shared sessions, whiteboard with markup and save features, guest account access, attendee permission control, and SSL security.

How it works - Convene 2.0 allows anyone with an Internet browser to host or attend an online meeting within seconds. Meeting organizers simply start a meeting instantly or schedule a meeting for a future date. Online meetings can be started or scheduled with a click of the mouse. The robust messaging system distributes the meeting notifications via email and any materials or documents that need to be used in the meeting can be stored and accessed during the online session. The unique whiteboard technology enables all participants to markup the shared files. The markups and the entire meeting can be saved for future reference and playback. Desktop share capability allows for either general desktop share, sizeable window area or application only share for added security.

Benefits – It lowers the cost of collaboration by eliminating the need to travel. It allows for quick impact, by enabling people to immediately setup an online meeting and perform the critical communication. It increases effectiveness of team communication because of the ability to share information visually and quickly.

Who can benefit – Anyone who depends on communicating with others. Many people can benefit from this technology, engineers, sales people, HR managers, and project managers, to name a few.

For Release 9 a.m. EDT, March 14, 2006
